

Robotic Process Automation (RPA)

RPA is the use of software to automate business processes such as interpreting applications, processing transactions, dealing with data, and even replying to emails.

RPA automates repetitive tasks that people used to do.

Edge Computing

It bypass the latency caused by cloud computing and getting data to a datacenter for processing. It can exist "on the edge."

Edge computing can be used to process time-sensitive data in remote locations with limited or no connectivity to a centralized location.

Quantum Computing

It is a form of computing that takes advantage of quantum phenomena like superposition and quantum entanglement. Have ability to easily query, monitor, analyze and act on data, regardless of the source. Quantum computing is multitude times faster than regular computing.
